Assumptions

1. Availability is checked at beginning and end incase the slot was taken and the sequence diagram on handles the available case.

2. Email service was simplified to the website lane. This made the flow easier to follow.

3. Payment details are entered on the request but charged after school staff approval.

4. If the renter chooses not to try another date, the process ends (fourth end point).

5. A payment failure leads to the end of the request, user needs to create a whole new one.
